

Student manual

e-learning video archive

Introduction

With the e-learning video archive, you can watch video lectures from world class experts even if you don't always have access to the internet. Here's how it works.

You need to do the steps below on the telephone or computer where you want to watch the lectures.

Step 0: Connect to university WiFi

This manual assumes you have free and unfettered access to the internet, for example at the university. So, connect to the university WiFi before you continue.

Step 1: Go to the website

Your professor will have given you the address of the website. Open it on your device.

Step 2: Find your lecture

Navigate the site until you find your lecture. Click on the video you want to watch. It might look something like this:

Step 3: Download the video

Now click the **Download** button, and choose in which quality you want to download the lecture. The first option is the lowest quality (but smallest download), the last option is the highest quality (and largest download).

Step 4: Give permission to download

If you haven't downloaded files from the internet before, you might need to give your browser permission to store files on your device.

Step 5: Repeat for other lectures

Proceed to download any other lectures you want to watch. Once you are done, all these lectures will have been stored on the device.

Step 6: Validate

Please check that you have downloaded the lectures correctly and that you can watch them.

First, close the browser so that you're back at the start screen, and then open the list of applications on your phone.

Then, click on the 'Files' app. There, you will see the files you have just downloaded. It might look like this.

Here you see the lecture we just downloaded. Click to open and watch it!

On some phones, this doesn't work, and the Files app will automatically close ("crash"). This is because your phone doesn't understand the video format of the lecture. To resolve this, see step 7.

Step 7: (optional) Install VLC player

Not all phones understand all video formats. If your phone doesn't play the video lecture you downloaded, you might need to install **VLC for Android**.

First, go to the Play Store, and search for **VLC**. Click on **VLC for Android**, then click **Install**. Once installed, click **open**. VLC will ask you for access to your photos and files. Click **allow**.

VLC might ask you more questions. Just accept the default option in each case, and **allow** or **yes** where necessary.

After you've clicked through the different screens and answered **yes** and **allow**, you will finally see the main VLC screen. It will show the lectures you've downloaded.

Then, click to watch the lecture!
